A NEW LINE LIST FOR THE O2 SCHUMAN-RUNGE SYSTEM

**ELIJAH R JANS,** Diagnostics for Hypersonics and Extreme Environments, Sandia National Laboratories, Albuquerque, NM, USA; **DANIEL SPENCER JENSEN,** Computational Multiscale, Sandia National Laboratories, Albuquerque, NM, USA; **LAURA M McCASLIN,** Combustion Research Facility, Sandia National Laboratories, Livermore, CA, USA.

In this work, a spectrally accurate linelist has been generated for the O\textsubscript{2} Schumann-Runge band system, X\(^{3}\Sigma_{g}^{-}\) - B\(^{3}\Sigma_{u}^{-}\), including both the bound-bound and bound-unbound transitions. *Ab initio* potential energy curves (PECs) for both states and the transition dipole moment (TDM) have been computed using the multi-reference configuration interaction (MRCI) method. Empirical refinement of the potential energy curves along with spin coupling constants have been performed using the DUO software utilizing the O\textsubscript{2} MARVEL database from Furtenbacher et al (J. Phys. Chem. Ref. Data 48, 023101 (2019)). Comparison with room and high temperature cross-sections have also been performed.

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy’s National Nuclear Security Administration under contract DE-NA0003525.
